## PROFESSIONAL SUMMARY

---

Master of Geographic Information Science (University of Queensland, 2026) with hands-on experience in spatial data analysis, remote sensing, and GIS-driven decision support. Skilled in ArcGIS Pro, QGIS, Python (geopandas, scikit-learn), SQL, and GlideApps for processing large geospatial datasets. Seeking a Spatial Analyst or GIS Analyst role in Australia to apply data-driven geospatial solutions to real-world planning, environmental, or urban challenges.

## EDUCATION

---

**Master of Geographic Information Science — University of Queensland, Australia** *Feb 2025 – Nov 2026*

- Awards: Dean's Commendation for Academic Excellence, Faculty of Science (Semester 1, 2026)
- Coursework: Geographic Information Systems, Spatial Analysis & Modelling, Earth Observation & Remote Sensing Image Processing, Geospatial Processing & Web Mapping, Landscape Ecology, Biogeography & Geomorphology, Environmental Impact Assessment, Data Management & Computing, Applied Research Methods

**Bachelor of Geographic Science — Huaiyin Normal University, China** *Sep 2018 – Jun 2022*

- Awards: College of Urban & Environmental Sciences Scholarship (×5)

## PROJECT & RESEARCH EXPERIENCE

---

**Spatial Data Analysis – Airbnb / Short-Term Rental Study | University of Queensland** *Mar 2026 – Present*

- Applied kernel density estimation and Getis-Ord Gi\* hotspot analysis in ArcGIS Pro / QGIS to 30,000+ AirDNA listings along the Gold Coast, mapping STR concentration across tourist nodes and urban functional zones.
- Built a 2023–2025 time-series dataset (1,000+ samples) using Python (pandas, geopandas, scikit-learn); identified price volatility in core zones exceeding peripheral areas by 20%+.
- Translated spatial outputs into an event-driven dynamic pricing and tiered zoning framework, delivering stakeholder-ready reports 3× faster via LLM-assisted summarisation.

**Internet+ Innovation Competition – Geo-Product Design Lead | Provincial Silver Award (Top 5% of 200+ teams)**

*Jun 2024 – Dec 2024*

- Designed a GPS + BeiDou dual-mode positioning app for pet tracking, integrating geofencing alerts and location-based social features informed by 760+ survey responses analysed with AI-assisted clustering.
- Built 18 interactive Figma screens; key-path optimisation lifted click-through conversion by 35% in usability testing.

## PROFESSIONAL EXPERIENCE

---

**Data & Commercial Operations Intern – Automotive | Bilibili, Shanghai** *Nov 2025 – Feb 2026*

- Built a data monitoring framework on first-party platform data, delivering 20+ weekly/monthly reports analysing traffic structure, creative performance and audience-matching to surface CTR and targeting issues.
- Applied Python + AI-assisted segmentation to define 10+ NEV client audience profiles (Huawei HIMA, Zeekr, Li Auto), lifting CTR by 15–25%.

**Sales Associate | David Jones (Premium Department Store), Brisbane**

*Sep 2025 – Nov 2025*

- Served Australian and international customers in English as the primary working language during Black Friday and Christmas peak periods; personal peak-day sales AUD 3,000+ (top 10% in store).
- Developed cross-cultural communication skills and on-the-ground consumer behaviour intuition that complement quantitative spatial analysis.

## TECHNICAL SKILLS

---

**GIS & Remote Sensing:** ArcGIS Pro, QGIS, ENVI/ERDAS (basics), spatial analysis, hotspot & network analysis, map visualisation, cartography, geocoding

**Programming & Data:** Python (pandas, geopandas, scikit-learn), R, SQL, Power BI, GlideApps (no-code app development); data cleaning, exploratory analysis, dashboarding, geospatial reporting

**AI-Augmented Workflows:** ChatGPT, Claude, Copilot; prompt engineering for spatial data cleaning, code generation, geo-text extraction and automated report drafting

**Languages:** English – professional working proficiency (IELTS 7.5, Listening 8.5); Mandarin Chinese – native
