PROFESSIONAL SUMMARY

Master of Geographic Information Science (University of Queensland, 2026) with hands-on experience in spatial data analysis, remote sensing, and GIS-driven decision support. Skilled in ArcGIS Pro, QGIS, Python (geopandas, scikit-learn), SQL, and GlideApps for processing large geospatial datasets. Seeking a Spatial Analyst or GIS Analyst role in Australia to apply data-driven geospatial solutions to real-world planning, environmental, energy and infrastructure challenges.

EDUCATION

Master of Geographic Information Science — University of Queensland, Australia *Feb 2025 – Nov 2026*

- Awards: Dean's Commendation for Academic Excellence, Faculty of Science (Semester 1, 2026)
- Coursework: Geographic Information Systems, Spatial Analysis & Modelling, Earth Observation & Remote Sensing Image Processing, Geospatial Processing & Web Mapping, Landscape Ecology, Biogeography & Geomorphology, Environmental Impact Assessment, Data Management & Computing, Applied Research Methods

Bachelor of Geographic Science — Huaiyin Normal University, China *Sep 2018 – Jun 2022*

- Awards: College of Urban & Environmental Sciences Scholarship (×5)

PROJECT & RESEARCH EXPERIENCE

Spatial Data Analysis – Airbnb / Short-Term Rental Study | University of Queensland *Mar 2026 – Present*

- Investigated how major events shape short-term rental prices and spatial demand on the Gold Coast (2023–2025), motivated by its linear tourism geography and approaching cycle of major-event hosting, including the 2032 Brisbane Olympics.
- Processed spatial data with Python (GeoPandas) for kernel density and Location Quotient mapping, then ran R-based fixed-effects regressions and analysis across ~4 million property-day observations and 27 verified events.
- Revealed selective price premiums (sport +3.2%, festival +2.4%) shaped by event footprint geometry, with spatial demand patterns concentrating most sharply near circuit-type venues.

Internet+ Innovation Competition – Geo-Product Design Lead | Provincial Silver Award *Jun 2024 – Dec 2024*

- Collaborated with a student team to design a GPS + BeiDou dual-mode app for pet tracking, integrating geofencing alerts and social features informed by 760+ survey responses.
- Co-built 18 interactive Figma screens with teammates; optimisation lifted click-through conversion by 35% in testing.

PROFESSIONAL EXPERIENCE

Data & Commercial Operations Intern – Automotive | Bilibili, Shanghai *Nov 2025 – Feb 2026*

- Built a data monitoring framework on first-party platform data, delivering 20+ weekly/monthly reports analysing traffic structure, creative performance and audience-matching to surface CTR and targeting issues.
- Applied Python + AI-assisted segmentation to define 10+ NEV client audience profiles (Huawei HIMA, Zeekr, Li Auto), lifting CTR by 15–25%.

Sales Associate | David Jones (Premium Department Store), Brisbane *Sep 2025 – Nov 2025*

- Served Australian and international customers in English as the primary working language during Black Friday and Christmas peak periods; personal peak-day sales AUD 3,000+ (top 10% in store).
- Applied cross-cultural communication skills to read customer needs and personality through conversation, tailoring recommendations and service in real time.

TECHNICAL SKILLS

GIS & Remote Sensing: ArcGIS Pro, QGIS, ENVI/ERDAS (basics), spatial analysis, hotspot & network analysis, map visualisation, cartography, geocoding

Programming & Data: Python (pandas, geopandas, scikit-learn), R, SQL, Power BI, GlideApps; data cleaning, exploratory analysis, dashboarding, geospatial reporting

AI-Augmented Workflows: ChatGPT, Claude, Copilot; prompt engineering for spatial data cleaning, code generation, geo-text extraction and automated report drafting

Languages: English – professional working proficiency (IELTS 7.5, Listening 8.5); Mandarin Chinese – native
